The ESG Group – System partner of the automotive sector

Car manufacturers and supplier worldwide put their trust into ESG Group services. ESG is an engineering service provider, process and technology consultant, and IT and training specialist for its customers. ESG and its subsidiaries are system partners to their customers, supporting them along the entire added-value chain from development and market introduction to after sales. To do this, ESG Group operates 20 branches in Germany and abroad.

The company's main development objectives include consultation, design, development, tests, and integration as well as project management and engineering for software and architecture of the complete vehicle, electronic system development, human-machine interfaces and driver assistance systems.

Through the NoAE, Network of Automotive Excellence, ESG is a member of the Competence Networks Germany initiative of the Federal Ministry for Economics and Technology. In addition, the company participates in international research projects such as MYCAREVENT or SPARC as well as being a member in the FlexRay, AUTOSAR and ASAM consortiums and numerous associations such as the German Association of the Auto Industry (VDA) or its French pendant SIA.
