Germany

The ESG Group – Partner of Aviation and Aerospace

The German armed forces, the armed forces of other nations, public authorities and industrial companies all over Europe trust the products and service of the ESG Group. The company is a specialist for the development, integration and operation of complex electronics and IT systems. Customised solutions for the aviation and aerospace industry have been among its focal areas for more than four decades.

ESG supports its customers during the entire life cycle of its aircraft. The company is a neutral technology and process consultant for studies and concepts and system comparisons, it takes over product support tasks for customers, and supports the operational reliability of systems through special training courses. The in-house development and integration of new avionics systems plays a major role. The systems are efficiently, economically developed and assessed in an ultra-modern simulation centre at an early stage.

ESG is a design organisation according to EASA Part 21J and a certified contractor of Bundeswehr aircraft systems and equipment.
